Convention

"Clear as the sun:
problems and technology
for the illumination in the OR"

27 May 2010
Bologna

“Clear as the sun: problems and technology for the illumination in the OR”

9.00 hs Participants Registration

9.30 hs Opening

Moderator

Dr. Eng. Gianluca Bandini

Responsible of Maintenance Direction Biomedical Technologies
University Hospital Policlinico S. Orsola - Malpighi

10.00 hs Dr. Eng. Vincenzo Ventimiglia

A.D. di SLT “The state of the art: evolution of a rule not widely known”

10.40hs Dr. Eng. Alessandro Damilano

Purchase Department AUSL Bologna

“Seeing correctly from the beginning: experiences on acceptance and trial tests”

11.20 - 11.40hs Coffee break

11.40hs Dr. Eng. Leo Traldi

Responsible of Maintenance AOSP Policlinico di Modena

“Continual optimal vision: problems with maintenance of surgical lamps”

12.20hs Dr. Eng. Claudio Cecchini

Responsible of SIC AOSP Valtellina and Valchiavenna

“How to see the most: the best choice between different technologies offered by an evolving market”

13.30hs Closing – Lunch

Surgical interventions represent one of the most demanding challenges for doctors and paramedical staff mostly regarding visual efficiency.

Therefore a dedicated and avant-garde illumination is needed, choosing a system which grants optimal levels of illumination and visual comfort obtained with quality light, fundamental for hard and long tasks.

Surgical lamps in the market have very diverse technologies and are widely spreading those with the new LED technology. There are visual parameters to evaluate carefully, such as light intensity, colour temperature in Kelvin degrees and the colour rendering index in % IRC.

Based on the clinical needs, such aspects are to be considered to optimize the vision and are also to be controlled and granted in time.

For these reasons, a correct management of the maintenance is fundamental to grant good performances during its whole life cycle.

The law, in this sense is being modified to grant the highest levels of performances on a wide range.

All the aspects to compare in order to see the quality of a surgical lamp are to be considered and analyzed also in the phase of technology acquisition.

This Convention will try to “shine a light” on these and other aspects.
