

ACEM successful at MEDICA 2012

More than 130.000 visitors (coming from 120 countries) and 4500 exhibitors reconfirm MEDICA, held in Düsseldorf some days ago, as world leader exhibition for the medical sector.

The unending number of visitors at the stand of ACEM Medical Company granted an extremely positive balance.

Once again ACEM products aroused great interest in its customers and dealers coming from all over the world who had the possibility to know the news of its wide range of LED lamps for examination, minor surgery and operating room.

STARLED 1 EVO (examination lamp) has been improved in its technology and performances. Its configurations have been enlarged with a new ceiling version and its functional I-SENSE control panel allows to adjust the light beam accurately according to the different needs.

STARLED 3 EVO PLUS (minor surgical lamp) is more and more sophisticated and has been provided with ENDO function (light up) that grants an ambient light thanks to light beams coming from the upper part of the lamp. Furthermore, it has the possibility of focusing the light beams with a simple clockwise or anti-clockwise rotation of the handle and is provided with I-SENSE control panel too.

SOLED 15 is the latest development launched by ACEM. This is an LED lamp for diagnostics, minor surgery and universal applications, ideal for small operations, intensive care, recovery room, first aid, cosmetic and dental sector. Soled has a round shape that makes it handy and is available ceiling, wall and trolley mounted.

CIRCLED is an LED magnifier luminaire suitable for countless fields of application. It is supplied with biconvex magnifier made of optical glass and a magnification of 3 diopters (5 on demand). It is a perfect tool for an accurate control of details. It can be used in several sectors, not only in the medical one and it is available wall, table and trolley mounted.

OT- SYSTEM completes the range as state-of-the-art lighting system for operating room. It is composed by **STARLED 5** and **OT- STARLED 7** (the configurations can be adapted to the different needs). Both lamps are ergonomic, accurate, reliable and provided with I –SENSE controls (the synchronization option is available on demand). This OP-system can be configured up to 4 arms and thanks to the AVSM system it is compatible with the whole range of ACEM video cameras and monitors.

The new **System for Integrated Control of Surgical Environment**, launched by ACEM for the first time at MEDICA this year, met with the customer's approval too. This system called **Xe** allows to control and automate surgical procedures and to have the integrated management of all the devices of the operating room, i.e. the control of audio/video signals, lights in the rooms, electromedical devices and integration with the hospital information system through the use of a touch display control panel.
