

New lights for ACEM at MEDICA 2011

23rd November 2011

ACEM Medical Company (Division of ACEM SpA) got great results and success during its participation in MEDICA 2011 (Düsseldorf – Germany) that came to its end a short time ago and that has proved once again to be the most important International Medical Fair in terms of news, exhibitors number and qualified visitors attendance. ACEM products have been greatly appreciated and this has reconfirmed the fact that STARLED lights represent a range of state-of-the-art products on the market. The news shown during MEDICA of this year aroused great interest:

CIRCLED is a new LED magnifier suitable for countless fields of application. It is supplied with biconvex magnifier made of optical glass with a diameter of 120 mm and a magnification of 3 diopters (5 on demand). The 7 new generation LEDs provide an optical lighting with a considerable costs decrease in terms of power consumption and maintenance. CIRCLED is easy to be moved and positioned and has a simple and functional design (it is available rail, wall, table and trolley mounted).

SOLED is the new examination LED light for outpatient use launched by ACEM. It has been designed and created to improve and enlarge the wide STARLED range meeting different requirements. SOLED is ideal to be used for minor surgery, intensive care, recovery room and first aid. Thanks to its easy-to-move and ergonomic structure it is suitable for diagnostics, test labs and dental surgery and is available wall, trolley and ceiling mounted. Its round shape and circular layout of its 23 LEDs give the lamp comfort and practicality both in use and moving. SOLED is available in its **Medental** version too that thanks to the possibility to choose the shape of the light beam can be used both in the medical and dental sector.

ACEM Medical Company has shown once again its great care in the research and development of its products to allow surgeons and medical staff to operate under the best working conditions. The comparison, during MEDICA exhibition, with other companies specialized in the medical lighting field, confirms the use of LEDs as state-of-the-art technology and sets ACEM Medical Company as leader company in this sector.
